The book series on Change Processes is a trans- and interdisciplinary sequence of books. The purpose is to publish dedicated research on current societal and technological challenges for engaging in democratic, responsible, and sustainable development. The book series communicates research as a basis for critical reflection, development of change strategies and empowerment within various societal areas such as nature, climate, work, welfare etc.

Contribution to research which are developed in dialogue and collaboration with and/or in support of citizens, civil society, organizations, and movements is key. With the book series, we want to create dialogue between different change-oriented research directions such as critical participatory action research/ critical utopian action research, co-creation/ participatory design/ social and socio-technical innovation research and other research approaches that focus on democratic, responsible, and sustainable development.

The book series includes research that critically examines barriers and opportunities for:

- social justice, inclusive communities, and empowerment
- developing alternatives to market orientation and economic growth
- maintaining the welfare state and improving the living conditions of vulnerable groups
- responsible user- and citizen engagement
- sustainable technological innovation

The book series aims at contributing to the discussion on theoretical approaches, methods, , experiences, challenges, and ethical points of attention and findings within change-oriented research, which investigates and contributes to social and socio-technical innovation, sustainability, responsibility, inclusive communities, and democracy.

The conditions for scientific work and the question of how scientific practice can contribute to the development of knowledge that promotes a sustainable democratic societal and technological development is also a focal point in the book series.

The book series is targeted researchers across disciplines. The book series publishes contributions in Danish, English and Spanish.

The editorial board includes:

Associated Professor Tom Børsen, AAU

Associated Professor Helle Nedergaard Nielsen, AAU

Part time lecturer and researcher, Annette Bilfeldt, RUC and Universidad Catolica, "San Pablo", Sant Cruz, Bolivia

MSc. Research Consultant Techno-Anthropology Jorge Ivan Contreras Cardeno, Danish institute for Fire and Security Technologies (DBI)
